

Aravind Aniseti

Data Analytics Lead | AI & Data Solutions Architect | AWS | Generative AI & RAG

aniseti.ar@gmail.com | (804) 585-5047 | Virginia, USA

[LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Medium](#)

Data Analytics Lead with 8+ years translating enterprise requirements into governed analytics, cloud data, automation, and applied-AI solutions across federal and commercial environments. AWS Certified Solutions Architect - Associate with experience spanning AWS, Redshift, Snowflake, SQL, Python, Power BI, RAG design, operational controls, and cross-functional solution delivery. Creator and Product Architect of Textent, a private GenAI product architecture for evidence-backed review of complex, versioned documents.

ENTERPRISE DELIVERY: FEDERAL AVIATION ADMINISTRATION (FAA) | CISCO | KAISER PERMANENTE

SIGNATURE AI PRODUCT

Textent - Creator & Product Architect

Active development

Private GenAI Document Intelligence Product | *Verified offline core* | *AWS target architecture* | *Enterprise direction*

aravind-bit.github.io/textent | Product narrative, AWS architecture, and decision trade-offs

- Defined three guided review paths - Reuse, Show What Changed, and Decision Check - that turn complex document work into a bounded human-attention queue with exact evidence, consequence, and a clear next action.
- Implemented and verified the offline core for DOCX structural validation and main-body extraction, deterministic source-bound evidence anchors, input/token admission contracts, fail-closed future-model evidence validation, and immutable verification/idempotency contracts.
- Built an accessible React/TypeScript synthetic journey and protected-main verification; designed an event-driven AWS scale architecture using CloudFront, WAF, Cognito, API Gateway, S3, SQS/DLQ, Step Functions, Lambda, DynamoDB, CloudWatch, CDK, and a bounded Amazon Bedrock inference stage.
- Separated deterministic processing, bounded model judgment, exact-evidence validation, and human approval; defined a conditional enterprise direction for permission-aware Microsoft 365/Slack connectors, structure-aware chunking, embeddings, hybrid retrieval/reranking, evidence-backed RAG, controlled generation, and audit workflows.

PROFESSIONAL EXPERIENCE

Data Analytics Lead - Washington, DC

Mar 2021 - Present

Federal Aviation Administration (FAA) Program | *Karsun Solutions LLC - employer*

- Lead analytics delivery across business and technical stakeholders, translating reporting and operational needs into prioritized data products, reporting solutions, and decision-support workflows.
- Design Redshift/SQL data marts, reusable analytics models, Power BI reporting layers, metadata standards, and data-quality checks for consistent self-service reporting.
- Partner with product managers, engineering, operations, and program stakeholders to define KPIs, validate metric definitions, and align analytics delivery with business and compliance decisions.
- Build and support AWS data workflows using S3, Glue, Lambda, Step Functions, Redshift, SQL, and Python, including transforming Microsoft Teams communications into structured analytics datasets.
- Implement CloudWatch monitoring, alerting, validation, troubleshooting, and SQL/warehouse tuning to improve visibility and reliability for recurring analytics workflows and dashboards.
- Configure Power Automate notifications and support SQL connectors and retrieval-design discussions for an internal RAG chat using Azure OpenAI and Azure AI Search within enterprise security constraints.

Data Science Consultant

Feb 2020 - Mar 2021

Nexus IT

- Built AWS data and machine-learning workflows for credit-derivatives forecasting using S3, Glue/PySpark, Lambda, Step Functions, Redshift, and SageMaker, supporting data preparation, model training, and analyst-ready outputs.
- Developed Python forecasting and analytics workflows for credit-spread research and created Tableau and R dashboards covering portfolio exposure, sector risk, macro indicators, and cross-asset relationships.
- Partnered with analysts to replace manual Excel-based processes with repeatable data pipelines and curated reporting outputs.
- Developed Glue/PySpark transformations and orchestrated multi-step workflows with Step Functions and Lambda to improve failure handling and operational visibility for AWS analytics pipelines.

Data Engineer / BI Developer

Apr 2018 - Dec 2019

Cisco & Kaiser Permanente Client Engagements | Kforce Consulting - employer

- Migrated marketing and campaign datasets from Oracle to Snowflake and built SQL-based ETL workflows to improve analytics scalability and reuse.
- Created curated datasets for campaign analytics, security-lifecycle KPIs, incident analysis, and operational reporting across Cisco and Kaiser Permanente engagements.
- Developed BI dashboards and KPI reporting solutions supporting incident analysis, campaign-performance tracking, and stakeholder decision-making.
- Built time-series forecasting workflows for marketing ROI and media-spend analysis and documented pipelines, data models, and metric definitions for maintainability and reporting governance.

CORE EXPERTISE

Data & Cloud Architecture: AWS, serverless solutions, Amazon Redshift, Snowflake, S3, Glue, Lambda, Step Functions, SQL, Python, PySpark, ETL/ELT, and data modeling

AI Architecture & Analytics: Generative AI, RAG design, structure-aware chunking, embeddings/vector retrieval, hybrid search and reranking, structured outputs, LLM evaluation, human-in-the-loop controls, Azure OpenAI, Azure AI Search, Amazon Bedrock architecture, Power BI, Tableau, SageMaker, and Power Automate

Solution Delivery: Requirements discovery, stakeholder leadership, architecture trade-offs, security and privacy, CI/CD, CloudWatch, data quality, reliability, and technical documentation

SELECTED PORTFOLIO PROJECTS

FinSense - Built a Python/OpenAI/Streamlit earnings-intelligence prototype with config-driven document ingestion, structured JSON insight packs, KPI extraction, AI summaries, and document-aware Q&A over a limited set of sample earnings materials.

StreamShift - Created a media-merger strategy sandbox combining explainable rules, embeddings/FAISS, traceable sources, interactive buyer/target scenarios, IP-similarity views, and clearly labeled exploratory predictions.

OnePlan AI - Developed a synthetic cross-media planning workflow spanning data generation, linear/XGBoost response modeling, reach-overlap simulation, constrained optimization, and explainability to compare conversion and reach trade-offs.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate (valid through Aug 2027) | **AWS Certified AI Practitioner** (valid through Jan 2028) | **Tableau Desktop Specialist**

EDUCATION

M.S.: Engineering & Operations Management - University of New Haven

B.Tech.: Electronics & Communication Engineering - JNTU, India
