

Aravind Anisetti

Data Analytics Lead | AI & Data Solutions Architect | AWS | Generative AI & RAG

anisetti.ar@gmail.com | (804) 585-5047 | Virginia, USA

[LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Medium](#)

Data Analytics Lead and AWS Certified Solutions Architect with 8+ years of experience delivering analytics, cloud data, automation, and applied AI solutions across federal and commercial environments. Hands-on with AWS, Azure OpenAI, Azure AI Search, RAG, SQL, Python, Power BI, and operational reliability. Creator and Product Architect of Textent, a private GenAI document-intelligence product for evidence-backed, audit-traceable review of complex, versioned documents.

INDEPENDENT GENAI PRODUCT

Textent - Creator & Product Architect
GenAI Document Intelligence Product

Private

[Textent](#) | Product case study, AWS architecture, and decision trade-offs

- Created Textent to help teams review long, versioned documents without losing the evidence behind each decision. Designed Reuse, Compare, and Decide workflows that surface material changes, shifts in intent, business impact, and the next human review action.
- Built and tested an agentic document-intelligence workflow using LangChain, LangGraph, FAISS, and Amazon Bedrock. The system aligns related sections across document versions, identifies changes in intent, obligations, assumptions, and decision impact, validates every finding against paired source evidence, and routes uncertain or consequential findings for human approval.
- Built and tested an earlier serverless review pipeline with AWS Lambda, S3, SQS, and Amazon Bedrock. Added structured outputs, source-linked evidence, IAM-scoped execution, immutable snapshots, lineage, bounded model behavior, and human review controls.

PROFESSIONAL EXPERIENCE

Data Analytics Lead - Washington, DC

Mar 2021 - Present

Federal Aviation Administration (FAA) Program | *Karsun Solutions LLC*

- Lead analytics delivery for business and technical stakeholders. Translate reporting and operational needs into prioritized data products, automation, and decision-support workflows.
- Built Power BI monitoring and Power Automate alerts for a growing mix of streaming and batch ETL workflows. Reduced failure detection and triage from 1-3 days to within one hour.
- Reduced a large historical-data ingestion from up to six hours to 30-60 minutes. Partitioned source data by date, staged raw files in S3, and parallelized StreamSets processing.
- Design Redshift/SQL data marts, reusable analytics models, Power BI reporting layers, metadata standards, and data-quality checks for consistent self-service reporting.
- Build AWS data workflows with S3, Glue, Lambda, Step Functions, Redshift, SQL, and Python. One workflow transforms Microsoft Teams communications into structured datasets for analysis and reporting.
- Built a Power Apps and Power Automate workflow for AD-group reviews. Added daily monitoring, exception flags, change-history exports, and notifications to strengthen least-privilege governance.
- Support a bounded internal RAG capability using Azure OpenAI and Azure AI Search. Configure Power Automate notifications, assist with SQL connectors, and contribute retrieval-design input within enterprise security controls.

Data Science Consultant

Feb 2020 - Mar 2021

Nexus IT

- Built AWS data and machine-learning workflows for credit-derivatives forecasting. Used S3, Glue/PySpark, Lambda, Step Functions, Redshift, and SageMaker for data preparation, model training, and analyst-ready outputs.
- Developed Python forecasting and analytics workflows for credit-spread research and created Tableau and R dashboards covering portfolio exposure, sector risk, macro indicators, and cross-asset relationships.
- Automated recurring Excel-based analyst preparation by replacing manual steps with repeatable AWS data pipelines and curated reporting outputs.
- Developed Glue/PySpark transformations and orchestrated multi-step workflows with Step Functions and Lambda to improve failure handling and operational visibility for AWS analytics pipelines.

Cisco & Kaiser Permanente Client Engagements | *Kforce Consulting*

- Migrated marketing and campaign datasets from Oracle to Snowflake and built SQL-based ETL workflows to improve analytics scalability and reuse.
- Created curated datasets for campaign analytics, security-lifecycle KPIs, incident analysis, and operational reporting across Cisco and Kaiser Permanente engagements.
- Replaced multi-day email and Excel reporting with an automated Tableau system. It tracked product-security work from approval through production, highlighted bottlenecks, and delivered threshold alerts for leadership planning.
- Built time-series forecasting workflows for marketing ROI and media-spend analysis and documented pipelines, data models, and metric definitions for maintainability and reporting governance.

CORE EXPERTISE

Data & Cloud Architecture: AWS, serverless solutions, Amazon Redshift, Snowflake, S3, Glue, Lambda, Step Functions, SQL, Python, PySpark, ETL/ELT, and data modeling

AI Architecture & Analytics: Generative AI, RAG design, agentic workflow design, LangChain, LangGraph, structure-aware chunking, embeddings/vector retrieval (FAISS), hybrid search and reranking, structured outputs, LLM evaluation, human-in-the-loop controls, Azure OpenAI, Azure AI Search, Amazon Bedrock, Power BI, Tableau, SageMaker, and Power Automate

Solution Delivery: Requirements discovery, stakeholder leadership, architecture trade-offs, security and privacy, CI/CD, CloudWatch, data quality, reliability, and technical documentation

SELECTED PORTFOLIO PROJECTS

[FinSense](#) - Built a Python/OpenAI/Streamlit prototype for earnings analysis. It converts sample documents into structured KPIs, source-aware summaries, and document Q&A.

[StreamShift](#) - Created a media-merger strategy sandbox with explainable rules, embeddings/FAISS, traceable sources, and IP-similarity views. It helps teams compare buyer and target scenarios.

[OnePlan AI](#) - Developed a synthetic cross-media planning workflow using linear and XGBoost response models, reach-overlap simulation, constrained optimization, and explainability. It compares conversion and reach trade-offs.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate (valid through Aug 2027) | **AWS Certified AI Practitioner** (valid through Jan 2028) | **Tableau Desktop Specialist**

EDUCATION

M.S.: Engineering & Operations Management - University of New Haven

B.Tech.: Electronics & Communication Engineering - JNTU, India
